

THE SMALLEST PART OF LIFE

CSU INTERNATIONAL UNBRANDED PATIENT CAMPAIGN

Implementation Guide 2025

This content is for general information only and not medical advice. Talk to a healthcare professional.

INTRODUCTION

Chronic spontaneous urticaria (CSU) is more than a skin condition; it's a chronic skin condition with an overwhelming impact on daily life.

The Smallest Part of Life is an unbranded patient activation campaign created for the many CSU sufferers still searching for relief, empowering them to speak up about how their CSU impacts their sleep and daily life, and instilling hope for a life closer to their normal.

This implementation guide provides the support and understanding you need to create assets that effectively deliver the campaign in your market, so we can make a difference to people with CSU all around the world.

After reading these guidelines, you should refer back to individual sections as required when developing your own assets.

Any materials developed as part of this campaign must undergo your country's required regulatory review processes to ensure compliance with Novartis marketing policies, as well as any applicable local laws and regulations.

01 STRATEGIC FOUNDATION

This section outlines the core principles and objectives guiding our campaign. It encompasses an understanding of CSU, insights from the patient perspective, including the emotional, social, and physical burden, as well as campaign objectives and the desired behavior change. These elements collectively have steered our decisions and strategic direction.

CSU BACKGROUND

CSU is a **chronic skin condition** that causes itchy and often painful hives, rashes, or swelling to appear on the skin, with symptoms potentially lasting months at a time.

Most common in women and those **between the ages of 20 and 40**, CSU affects around 1% of the population, and unlike allergy-related hives, has **no clear external cause or trigger**.

CSU impacts all aspects of life for the people that live with it, from everyday routines to important events. The physical symptoms, especially itch, can disrupt sleep, work, and relationships, while the unpredictability of outbreaks causes stress and anxiety, taking a significant emotional toll.

Misperceptions and low awareness around CSU severity, as well as difficulties in diagnosis, mean that many patients live in silence, with commonly prescribed medications such as antihistamines (AH) often failing to relieve their symptoms.

PATIENT INSIGHT SUMMARY

The majority of patients with CSU match the Remibrutinib launch target profile: Uncontrolled symptoms on AH, with impact on sleep or daily function^{1,2}

CSU carries a big emotional and physical burden. Creating a campaign that truly resonates with patients and motivates them to act needs a strategic foundation that reflects their reality, shaped by real patient insights.

- Many people with CSU feel stuck on AH, with **the majority remaining uncontrolled**. Disrupted sleep and loss of daily function (social and work) due to itch are often reported as the biggest burdens
- Low awareness of CSU often leads people to normalize their symptoms, or self-manage without escalation
- The burden of CSU is **emotional, social, and physical**. This can include anxiety about unpredictable CSU outbreaks, embarrassment in social situations, loss of productivity or inability to focus at work, and other negative impacts on daily life
- On-demand treatment habits, trial-and-error with AH, and long diagnostic journeys (1–5 years) reinforce a sense of resignation and treatment fatigue

Sources: 1. Zuberbier T et al. Lancet. 2024. 2. Message performance insights from 'Remi Patient and Value Proposition Research 2024'.

Patient Profile

At a consultation with an HCP, symptomatic patients on AHs need to convey the impact of itch on sleep and daily life as these are the main overlapping drivers for treatment change, triggering treatment escalation.

Patient Insight

Top reasons to ask for more effective treatment¹

- Severe itch or hives
- Having trouble sleeping at night
- Daily life being affected (especially concentration / work)

*Due to itch,
sleep or function in daily life
is disrupted*

HCP Insight

Top drivers to initiate treatment change²

- Patients remain symptomatic,
- Patient unable to sleep throughout the night
- Patient's quality of life is significantly affected

Sources: 1. Remibrutinib CSU Patient VP & Segmentation Research 2024. 2. HCP CSU VP & Demand & Segmentation Study 2024 (n=443).

PATIENT SEGMENTS

	31% DESPERATE SEEKER	27% HOPEFUL ENDURER	23% RESIGNED	19% UNBOTHERED
Description	Highly impacted and anxious but proactive solution seekers	Long-term impacted (many >5 yrs), relief seekers who rely on their doctor	Highly impacted silent sufferers who have given up hope	Less impacted, feeling sufficiently in control
Approach to Treatment	Highly willing to try new treatments	Tried multiple treatments but remain significantly impacted	Try to manage their CSU with minimal intervention (AH)	Remain passively open for new treatments

Desperate Seeker is the segment to focus on at launch as they are:

- Facing high unmet need and most likely to ask for escalation early, priming them for activation
- A large segment to focus on at launch, reaching ~20% of desperate seekers on Remibrutinib would allow us to reach ambition in the first 2 years
- Hopeful Endurers may also respond, as some attitudes overlap. However, they are less proactive and less likely to ask for escalation early

Messages for the CSU activation campaign are tailored to the Desperate Seeker segment

CAMPAIGN OBJECTIVE

Strategic Priority

Objective:

Activate patients to speak up and effectively report their most significant symptoms and the impact of CSU on their daily lives. Empower them to have the meaningful conversation with their HCP so patients can ask for more.

The value proposition for patients is: There is new hope for a life closer to *your* normal!

Strategic Objectives:

- Help patients recognize when their current treatment isn't working, especially if they continue to experience symptoms while on AH
- Empower people with CSU to communicate the real impact of their condition on sleep and daily life to their doctor
- Give patients emotional permission and language to ask, "Is there something else we can try?"
- Prime patients for escalation moments by showing that a life closer to their normal is possible

Supporting Priority

Objective:

Increase CSU awareness, elevate discussions about the burden of urticaria and drive patients to see their doctor.

Strategic Objectives:

- Educate people with CSU and the general public that it is a distinct, immune-driven condition, not just an allergy or hives
- Reframe outdated beliefs (e.g. "there's nothing more they can do")
- Build urgency by highlighting the unpredictability and emotional burden of the disease
- Help people with CSU understand why HCP visits matter, even if they've tried AH before

BEHAVIOR CHANGE

FROM FEELING OVERWHELMED

Newly diagnosed and deeply affected, people with CSU often feel anxious, exhausted, and stuck. While they are open to finding relief, many struggle to navigate the limited treatment landscape, worry about side effects, or simply don't feel equipped to speak up. So they stay quiet and continue to cope.

TO CONFIDENTLY SPEAKING UP

With renewed hope and permission to ask for better solutions, patients feel empowered to voice the full impact CSU has on their daily lives, from sleep to focus to emotional well-being. They recognize that other options may exist and take an active role in conversations with their doctor or dermatologist to seek a life closer to their normal.

CONNECTION TO HCP

- Patient language and escalation cues mirror the HCP message platform, focusing on itch, sleep, and impact on daily life (social & work)
- By expressing how CSU still affects sleep and daily life, patients trigger HCP decisions for treatment change
- CTAs build emotional readiness and support faster escalation decisions. The campaign discussion guide will function as our main CTA

ABOUT OUR MESSAGING FRAMEWORK

Our messaging framework is designed to shift mindsets and spark action. It helps patients see that **CSU is not just a skin condition**; it's a disruptive, immune-related disease with a big emotional and physical impact.

Built around four communication pillars, the framework guides people with CSU from passive acceptance toward **confident, informed action**.

At its core is a simple, powerful idea: **There is hope for a life closer to your normal**.

By helping people with CSU recognize unresolved burden and encouraging them to speak up about it, we can build the emotional and practical foundation for behavior change and treatment escalation.

STORYFLOW

THERE IS HOPE FOR A LIFE CLOSER TO *YOUR* NORMAL

Tell your doctor about the impact of itch on your sleep and daily activities

Disease and Treatment Awareness

UNDERSTANDING CSU

TRUTH
(Problem – Patient Reality)*Acknowledge the emotional
and physical burden of CSU*

- CSU is not just a skin condition, it's unpredictable, disruptive, and emotionally draining
- Many people with CSU live with visible symptoms, disrupted sleep, and the fear of outbreaks
- Too often, CSU takes center stage in their lives and significant moments

Strategic role: This creates emotional resonance and positions the brand as understanding the true scale of CSU

ASK FOR MORE BEYOND AH

SHIFT
(Insight – What Needs to Change)

- Around half of people with CSU remain symptomatic on antihistamines
- Doctors often don't see the everyday burden of CSU symptoms, while patients live with them
- Unless you speak up, your doctor may not fully understand the scale of the problem

Strategic role: This builds tension and urgency. It invites action by highlighting what's missing

SPEAK UP

EMPOWERMENT
(Message – What Patients Can Do)

- Take charge of your CSU, your life doesn't have to be defined by it
- Speak up: Tell your doctor how CSU is impacting your life, sleep, work and relationships

Strategic role: Converts awareness into action. Makes the patient the agent of change

Activation

WHY IT MATTERS

ASPIRATIONAL
(Benefit – Why It Matters)

- There is hope for a way to minimize the disruption, caused by the unpredictability of CSU
- CSU worries can be the smallest part of your life

Strategic role: This creates emotional resonance and positions the brand as understanding the true scale of CSU

MESSAGE HOUSE

THERE IS HOPE FOR A LIFE CLOSER TO *YOUR* NORMAL
Tell your doctor about the impact of itch on your sleep and daily activities

Disease and Treatment Awareness

UNDERSTANDING CSU

Validate the emotional and physical burden

Key Messages

- **CSU is a chronic skin condition with a big emotional and physical impact¹⁰⁻¹²**
- CSU and its symptoms are unpredictable, causing anxiety, disrupting life, and overwhelming patients^{3,4,13}
- CSU symptoms (especially itch) and their unpredictability impact all aspects of life, from everyday routines to important moments²

Supporting Points

- CSU has no known external cause and is not an allergy⁸
- The condition can resolve over time; however, it is impossible to predict when⁶
- The unpredictability of CSU outbreaks can cause stress and anxiety¹³
- Many people with CSU avoid social situations because they are embarrassed by their visible symptoms, leading to social withdrawal and isolation¹⁵
- The difficulties with concentration, productivity, and daily activities people with CSU face are similar to those faced by people with atopic dermatitis (AD) or psoriasis (PSO)⁵
- 3 in 5 people with CSU have difficulty sleeping²⁻³

ASK FOR MORE BEYOND AH

Highlight treatment gaps and unmet needs

- **More than half of people with CSU remain symptomatic despite taking antihistamines^{9,11}**
- Your doctor may not realize how much CSU disrupts your life⁷
- If your current treatment isn't providing enough relief from CSU, it's time to speak up
- Tell your doctor about your symptoms and discuss your CSU care plan

- CSU is a chronic condition that needs ongoing treatment^{1,14}
- People with CSU have reported that AHs can lose efficacy over time and/or cause side effects such as drowsiness²
- The majority of people with CSU are uncontrolled on standard-dose AHs¹
- Studies show that CSU symptoms are often viewed differently by doctors and patients; 1 in 4 patients report worse symptoms than their doctor is aware of⁷

Abbreviations: CSU: Chronic Spontaneous Urticaria; AH: Antihistamine; Tx: Treatment; HCP: Healthcare Provider; RoA: Route of Administration; QoL: Quality of Life; MoA: Mechanism of Action

MESSAGE HOUSE

THERE IS HOPE FOR A LIFE CLOSER TO *YOUR* NORMAL

Tell your doctor about the impact of itch on your sleep and daily activities

Activation

SPEAK UP

Empower people with CSU to express their experience

Key Messages

- **Your voice is the key trigger in changing how your CSU is treated**
- Your doctor is on your side and wants to help you but may not see the scale of the disruption caused by your CSU
- Tell your doctor exactly how CSU is impacting your sleep, work, and everyday life
- A conversation could be the first step in reducing unpredictable CSU outbreaks

Supporting Points

- With limited appointment windows and misperceptions of CSU severity, clearly communicating the impact of your symptoms is key to prompting treatment change¹
- Share specific impacts such as lost sleep, impaired concentration, and social withdrawal so your doctor can see the full picture of what you're living with
- Advanced therapies beyond AH may reduce the negative impact of CSU on daily life. Ask your doctor about new treatment options

WHY IT MATTERS

Motivate to act and give hope for resolution

- **Make CSU worries the smallest part of your life**
- You can reduce the disruption and unpredictability of CSU
- Your doctor can help you reduce symptoms, so they don't affect your everyday life or important moments
- With the right management, CSU symptoms can be relieved to help you sleep better, stay focused, and minimize outbreak worries

- Your priorities and goals should guide your conversation with your doctor
- You deserve fast, lasting relief that works quickly and stays with you, so you can function in your daily life
- You can reframe CSU outbreak worries so they don't become such a big part of life

Abbreviations: CSU: Chronic Spontaneous Urticaria, AH: Antihistamine; Tx: Treatment; HCP: Healthcare Provider; RoA: Route of Administration; QoL: Quality of Life; MoA: Mechanism of Action

03 CREATIVE CONCEPT AND VISUAL GUIDE

This is where we bring our campaign to life, showing our research foundations, creative direction, and storytelling approach. The following section includes key visuals, both film and static executions, and design elements that capture the campaign’s essence.

MARKET RESEARCH OVERVIEW

Based on robust qualitative research including evaluation and refinement phases across different markets, our campaign direction stood out for its ability to **connect emotionally** and **motivate action** in our target patient profile.

People with CSU connected most with its **clear call to action**, **aspirational, emotionally activating tone**, and reflection of **real treatment goals**.

"CSU is like an annoying insect, a fly or mosquito and here, it's been caught and pushed aside."

The campaign really conveys the idea of being able to spend your valuable time more meaningfully. It's like saying goodbye to the version of yourself who suffers from CSU. This really came across, making me want to listen and find out more. I really don't want to be bothered by CSU during important moments.

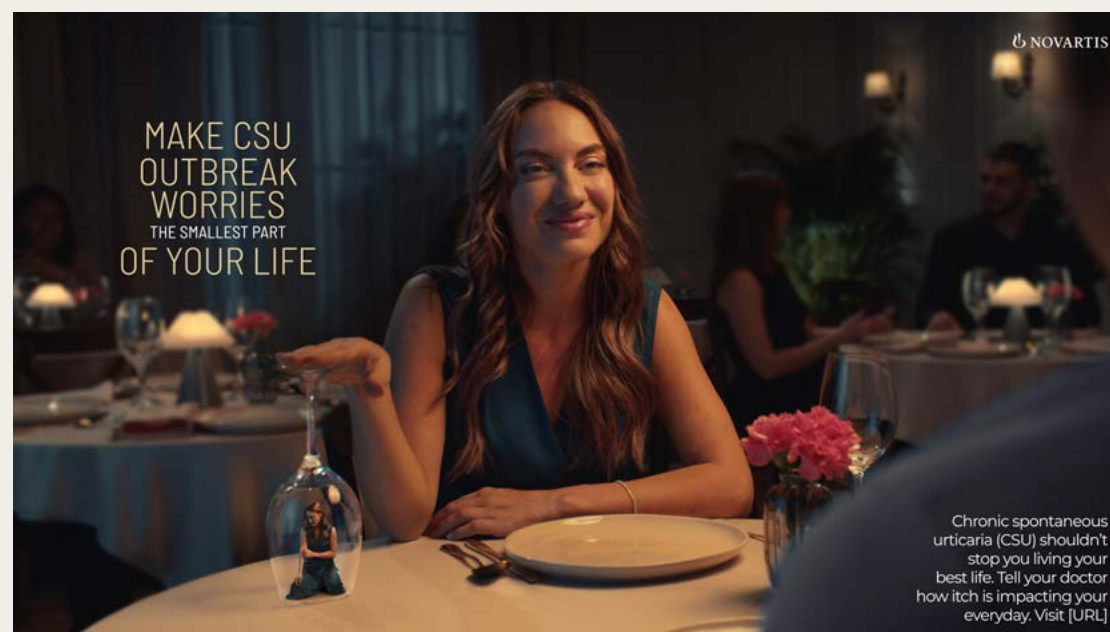

CONCEPT OVERVIEW

To show that it's possible to minimize the disruptive, overwhelming impact of CSU on everyday life, we have developed an empowering, emotionally resonant creative concept.

The concept depicts a miniature version of a CSU sufferer, showing exaggerated symptoms, enclosed beneath an upside-down glass, illustrating how CSU symptoms can be reduced.

Alongside, their full-sized self appears relieved and confident, continuing daily life with milder symptoms. This is the aspirational goal for CSU patients.

The overarching message: With the right treatment, this condition can be reframed. CSU can become the smallest part of your life.

EXECUTION

To fully reflect the different scenarios in which CSU can burden sufferers, our campaign features two executions, available as stills and as films for use online including social media.

Dining room scene: This execution shows CSU symptoms minimized in a social situation, like a wedding, a date, or dinner, allowing our hero to stay confident, stay in control, and stay in the moment.

Bedroom scene: This shows CSU symptoms and sleep disruption minimized, enabling patients to stay comfortable and sleep peacefully through the night.

Film

To communicate the full emotion of our campaign's story and maximize its resonance online and on social media, each scenario from our campaign has been realized as a 10-second film.

As digital communications increasingly rely on motion and short-form clips, these films should be used whenever the medium allows.

These visuals are available in a variety of formats; refer to the 'Campaign Assets' section of this guide for details.

ELEMENTS

The elements within the key visual have been carefully composed and should only be used as supplied in the art files. The key visual consists of the visual, headline, and body copy. The Novartis logo should be added in such a way that it is clearly visible.

Dining Room Scene

Headline: Make CSU outbreak worries the smallest part of your life

Body copy: Chronic spontaneous urticaria (CSU) shouldn't stop you living your best life. Tell your doctor how itch is impacting your every day. Visit (URL).

Allow space for references and footnotes as required by any relevant local regulations.

Bedroom Scene

Headline: Make CSU sleep disruption the smallest part of your life

Body copy: Chronic spontaneous urticaria (CSU) shouldn't keep you up at night. Tell your doctor how itch is impacting your sleep. Visit (URL).

Based on local regulations, add space for references and footnotes as required.

CROPPING GUIDANCE

Preferred cropping

The preferred cropping of the key visual keeps the appropriate size and balance of the creative elements. The image has been created with ample background art on all sides to allow for flexibility within different layout formats. Three different crops are available: 16:9, 1:1, and 9:16.

Special circumstances

While it is important to preserve the visual integrity of *The Smallest Part of Life* campaign as designed, we understand that special circumstances may arise where you may need to crop the image for a specific tactic. If such an instance arises, please contact the Global Team for further guidance.

Restaurant Scene

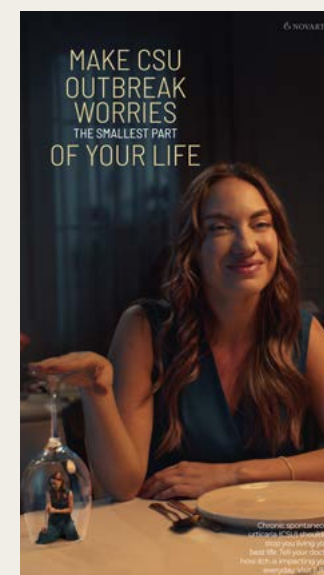

16:9 ↑

↓ 9:16

↑ 1:1

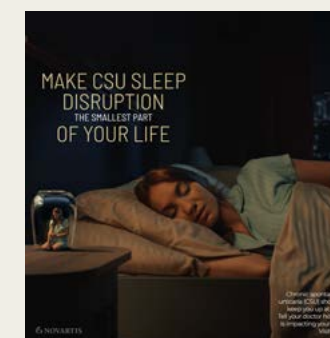

Bedroom Scene

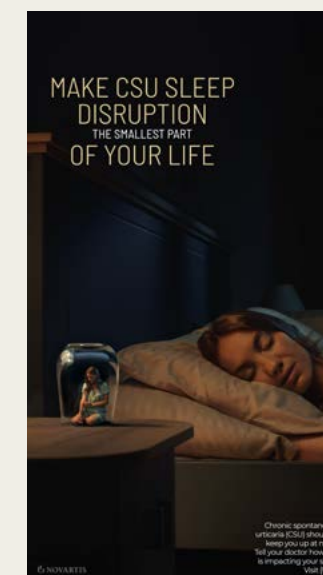

16:9 ↑

↓ 9:16

↑ 1:1

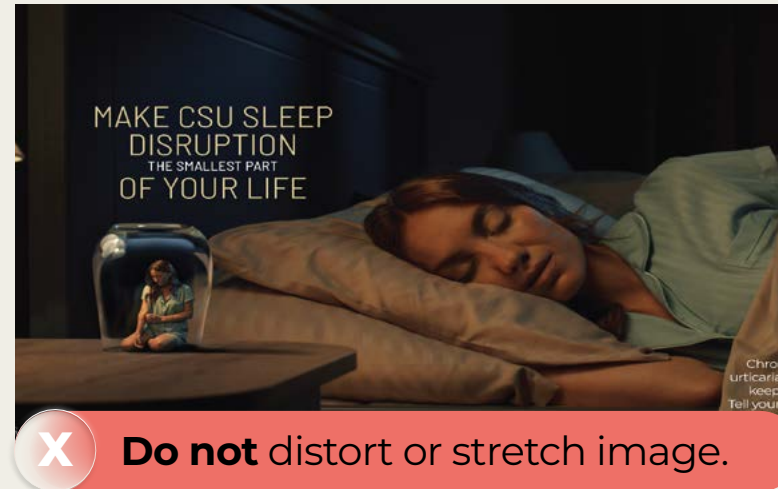

THINGS TO AVOID

Maintain the integrity of our campaign imagery and ensure that it stays true to its original design and intent by avoiding any distortion, warping, or skewing of proportions.

Do not incorporate elements of the image into alternative backgrounds, as this compromises the cohesive visual identity we aim to convey through carefully curated imagery.

Adhere to the guides provided when cropping for alternative formats (see page 22) to ensure all key elements of the visual remain in frame.

COLOR

For this campaign, a vibrant and yet complimentary color palette was chosen. The colors pick up hints from the key visual or expand on them to provide variety and keep layouts dynamic.

While we don't specify primary or secondary colors for our design, some colors may be better suited for certain uses.

Light Coral lends itself for call-outs and when discussing the condition as it creates a sense of urgency.

Light Coral and Cerulean are good choices for highlight colors for copy and headlines.

Alabaster is reserved as the background color for pages, especially where the glass effect is used.

Markets may choose a color selection that feels culturally appropriate.

Jasmine Yellow

RGB: 252 | 215 | 105
CMYK: 2 | 16 | 67 | 0
HEX: #fcd769

Light Peach

RGB: 97 | 195 | 217
CMYK: 0 | 19 | 31 | 0
HEX: #fdd9b7

Cerulean

RGB: 0 | 129 | 168
CMYK: 83 | 34 | 21 | 5
HEX: #0081a8

Alabaster

RGB: 240 | 238 | 230
CMYK: 7 | 6 | 11 | 0
HEX: #f0eee60

Light Coral

RGB: 238 | 112 | 103
CMYK: 0 | 68 | 52 | 0
HEX: #ee7067

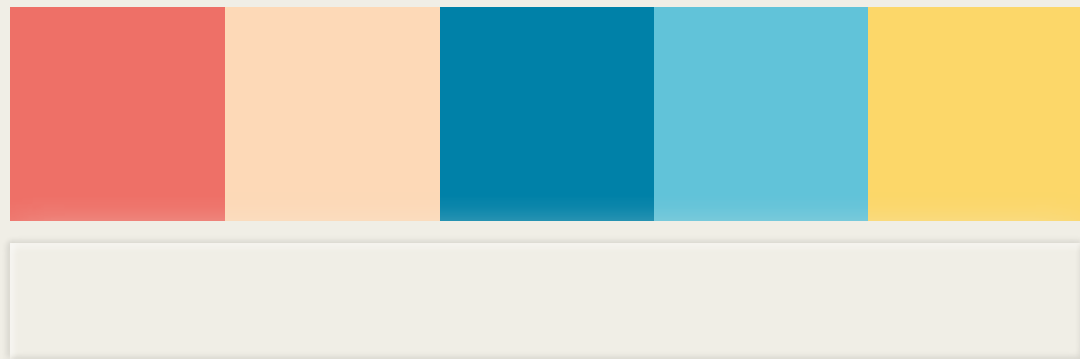

Sky Blue

RGB: 240 | 238 | 230
CMYK: 60 | 0 | 15 | 0
HEX: #61c3d9

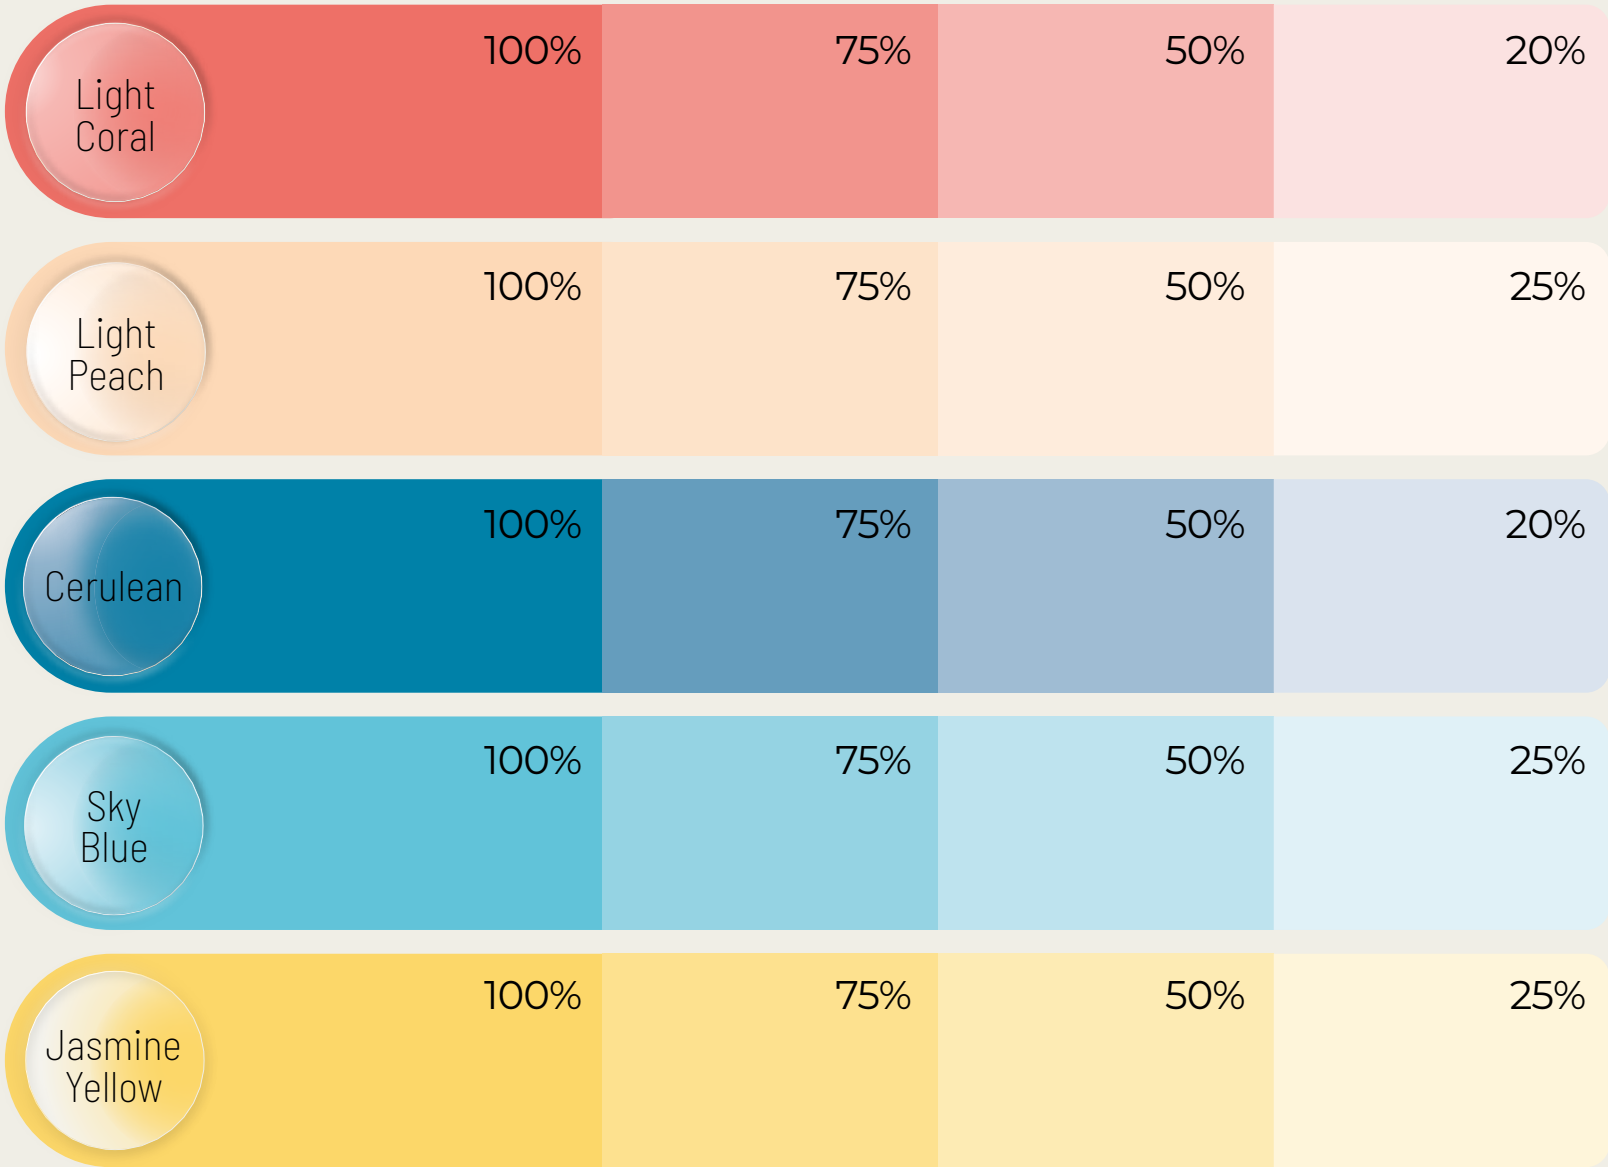

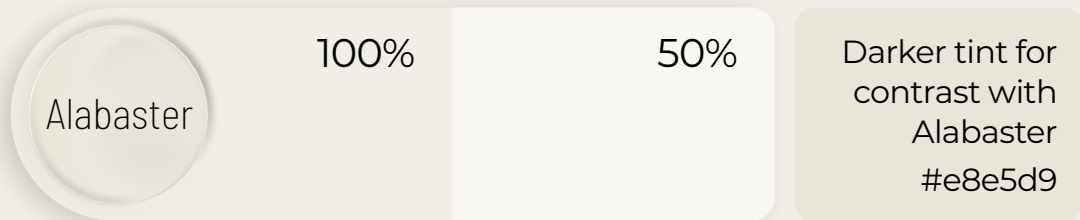

Solids

The colors may be used in equal proportions within a layout. While no single color is preferred over another, there shouldn't be too many colors used within a page. One color should serve as the main color, with others serving as accents. The proportions can vary from one page to the next.

Color Usage Ratio

Background Color

WCAG Color Compliance

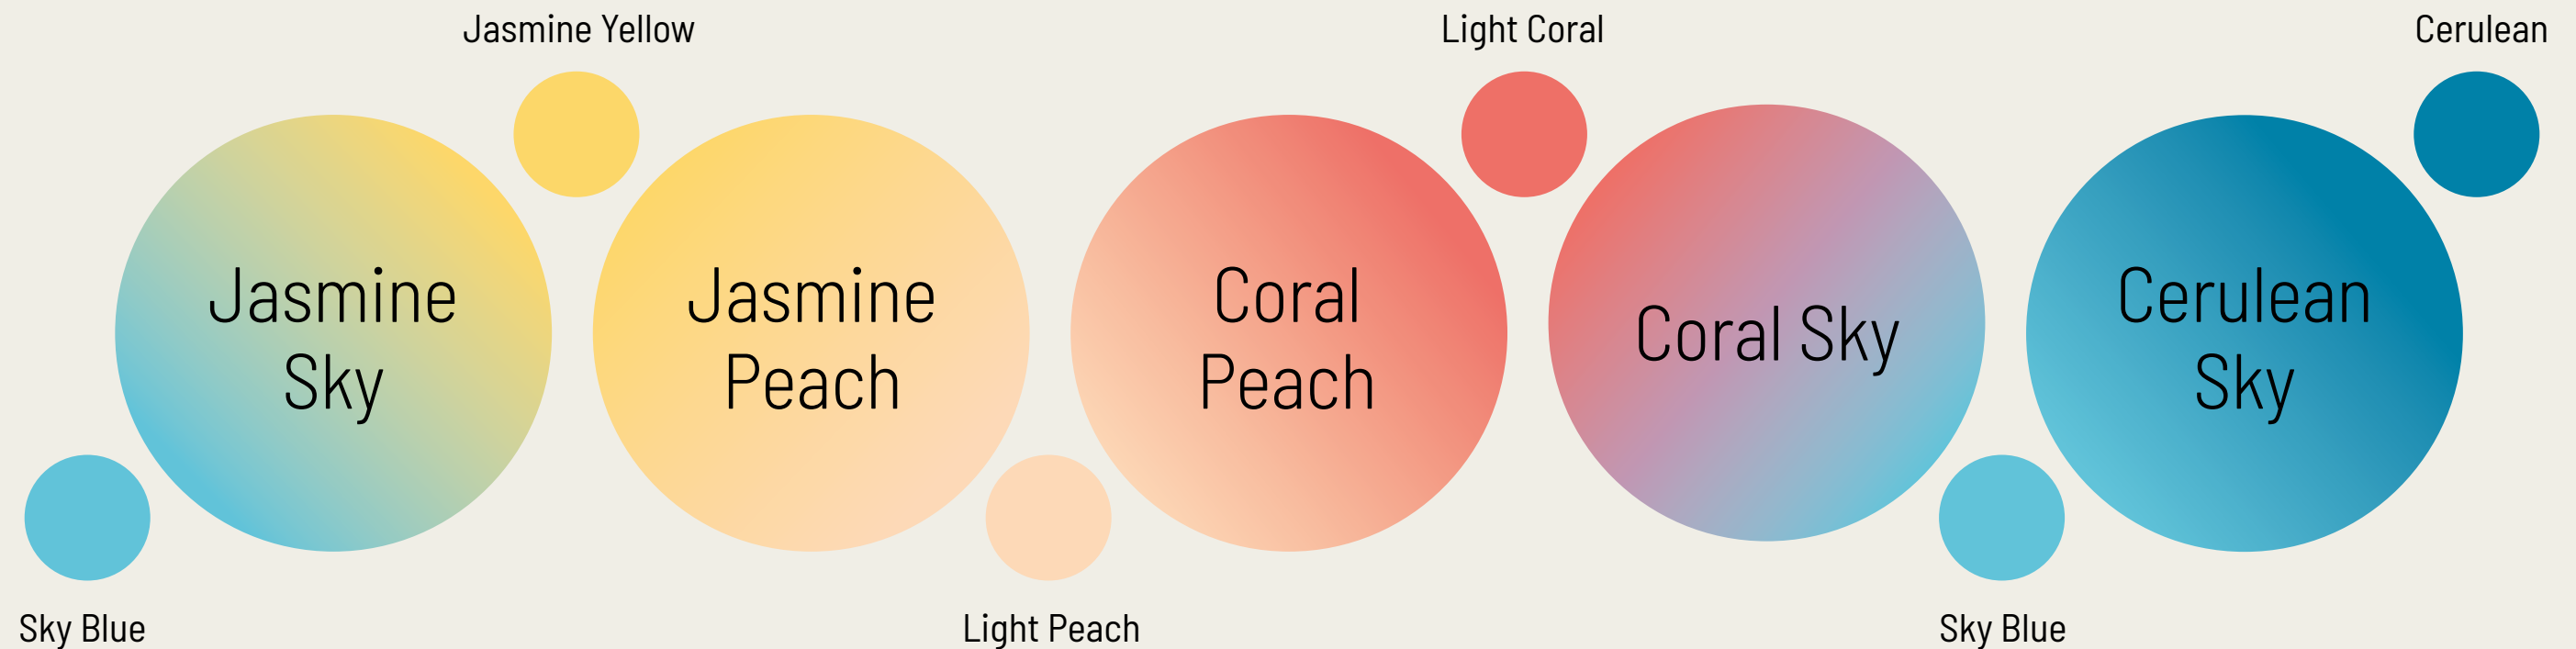

Digital typography colors must conform to contrast requirements from the Web Content Accessibility Guidelines (WCAG) for on-screen legibility. Compliance for each color pair is shown below.

Light Coral #ee7067	Light Peach #fdd9b7	Cerulean #0081a8	Sky Blue #61c3d9	Jasmine Yellow #fcd769	Alabaster #f0eee6

Gradients

As part of the color palette, you may also include gradients in backgrounds or design elements. These gradients not only add variety and keep a layout dynamic, they also give a subtle nod to the condition, reflecting a transition from one state to another.

Five gradients are available, as shown below. Use them sparingly for accents or call-outs. If using more than one gradient, use neighboring gradients that share a color.

FONTS

In our patient communications we use two fonts with multiple weights. To create a high-contrast, visually dynamic layout, we pair Barlow Semi Condensed and Condensed with the wider Montserrat. This pairing offers a balanced contrast with strong visual separation between elements.

Barlow Semi Condensed is a modern sans-serif typeface with slightly rounded letters, making it a friendly, practical font with excellent legibility. It is used as the key visual headline and call-outs. Barlow Condensed, a variant of the Barlow superfamily, may also be used in layouts, although not in the key visual headline.

ICONS

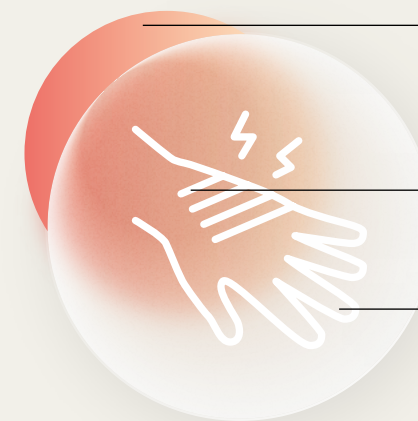

Icons are an important aspect of our branded communication. Use them to provide a quick visual reference for content or to accentuate key points.

We have one style of icon available in different colors, which can be used for various applications.

For call-outs and to emphasize the glass effect, use white icons. These can be overlaid on a glass effect element created in a layout program or with one of the glass effect backgrounds included in the icon files.

WHITE ICON

Use a white icon with a thicker line as a call out treatment or graphical element. Make sure there is enough contrast for the icon to be readable.

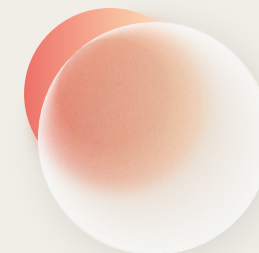

Coral Peach gradient on background circle

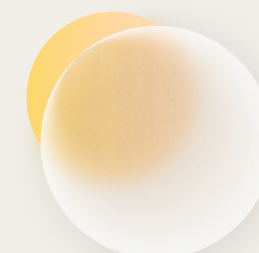

Rounded corners

Icon created with thicker lines for better contrast

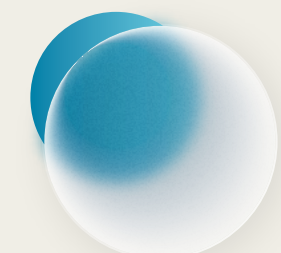

These are the background glass effect circles that can be used in layouts.

Coral Peach

Jasmine Peach

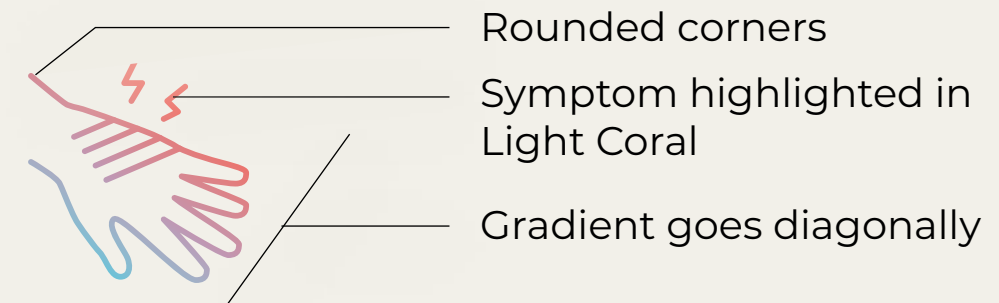

Cerulean Sky

For lists that use multiple icons, it's recommended to use the black or gradient color version, depending on the background.

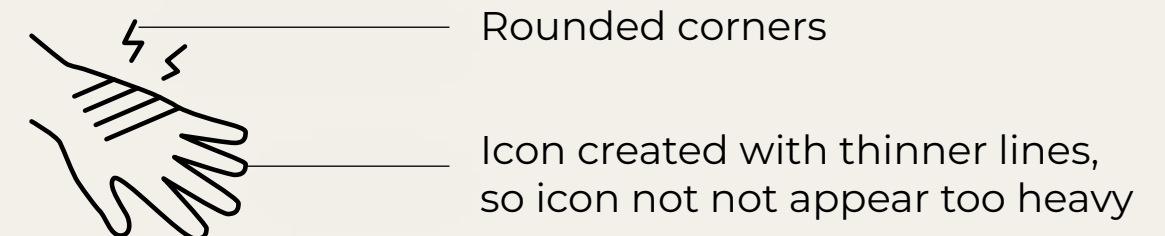

GRADIENT ICON

The Coral Sky gradient should go diagonally or when showing symptoms, the gradient should highlight the symptom with the Coral.

BLACK ICON

Use the black icon in lists or on color or gradient backgrounds that need a simpler icon for better contrast.

DESIGN ELEMENTS

The Smallest Part of Life campaign brings focus to the condition of CSU and calls on patients to take action to turn CSU into the smallest aspect of their daily lives.

In layouts, we bring the campaign to life by adding elements and techniques that visually convey the feeling of glass, and also offset smaller elements from content to represent the smallest part in a graphical way.

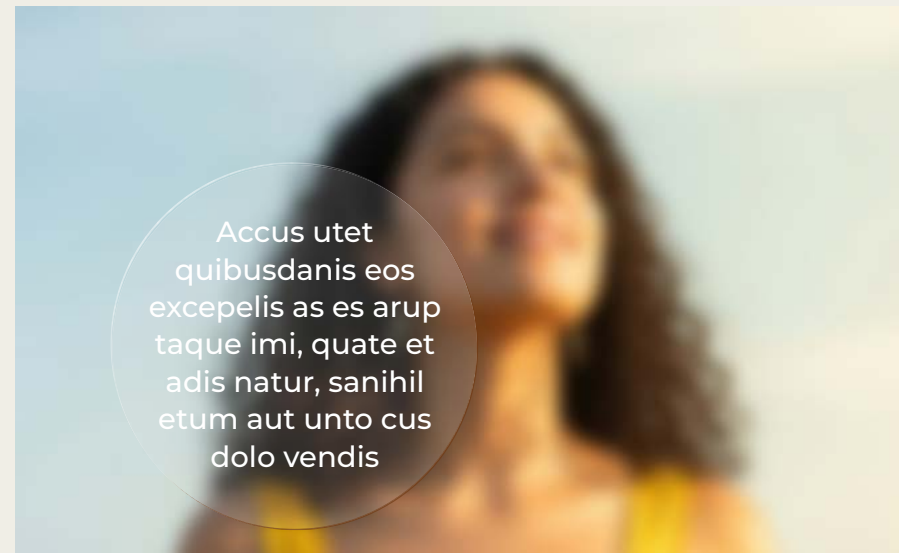

This page and the following pages give some examples on how the glass look can be achieved in layouts and in different programs.

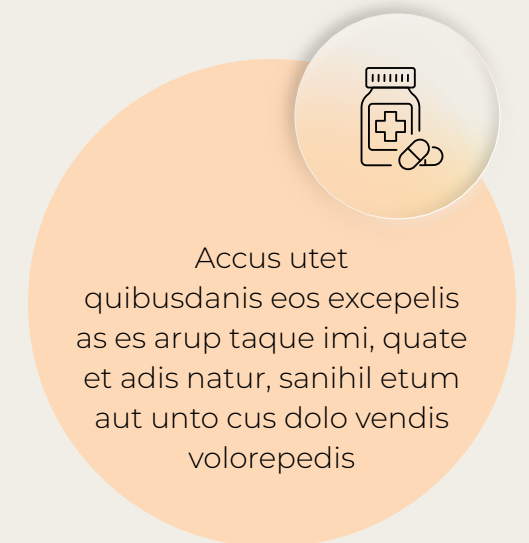

Accus utet quibusdanis eos excepelis as es arup
taque imi, quate et adis natur, sanihil etum aut
unto cus dolo vendis volorepedis

aut unto cus dolo vendis
volorepedis

Glass Effect

Bringing the glass effect to life in layouts will look different depending on the program used to create the effect. When adding a glass to an image, using Photoshop allows for the most control and refinement.

If Photoshop is not a suitable option, a similar if not as realistic result can be achieved in layout programs such as InDesign using blurs and overlays.

Stock image
used the
basis for the

Shape
created in
PSD for the
displacement
filter

Glass element on imagery

On imagery, you can place a glass element in Photoshop by first creating a shape to use with the Displace filter. Then, add inner shadows, a stroke, and drop shadow to the shape.

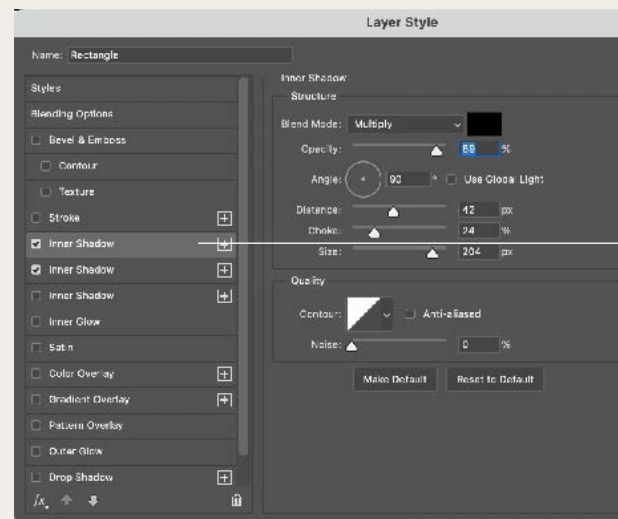

1.

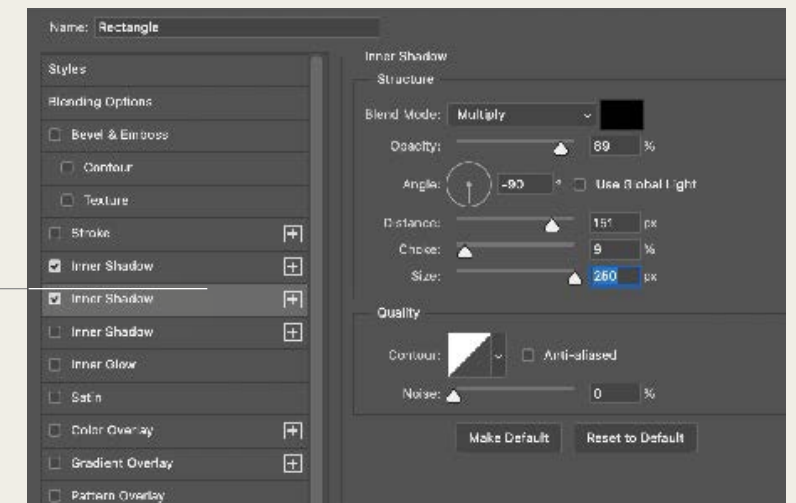

Shape created with a fill set to 0% and effects applied in the layer styles.

White color fill overlays image

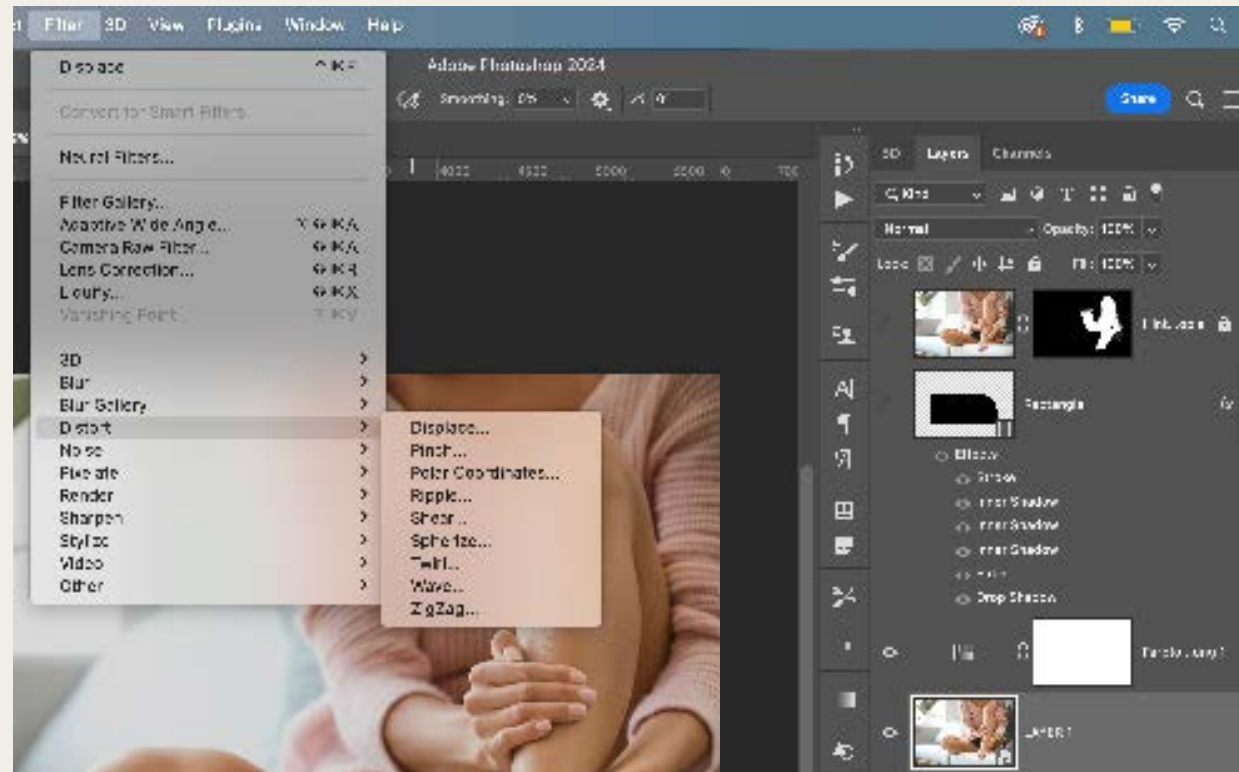

Save file as a separate file for the Displace Filter to be used in the next step.

Layer style that includes two inner shadows set in opposite directions. Adjust the angle, distance, size and opacity according to the needs of the image.

2.

Convert the image to a **Smart Object**. With the Smart Object selected, go to **Filter > Distort > Displace**. In the selection window, choose scale values appropriate for the image size (around 80, vertical and horizontal) for the displacement.

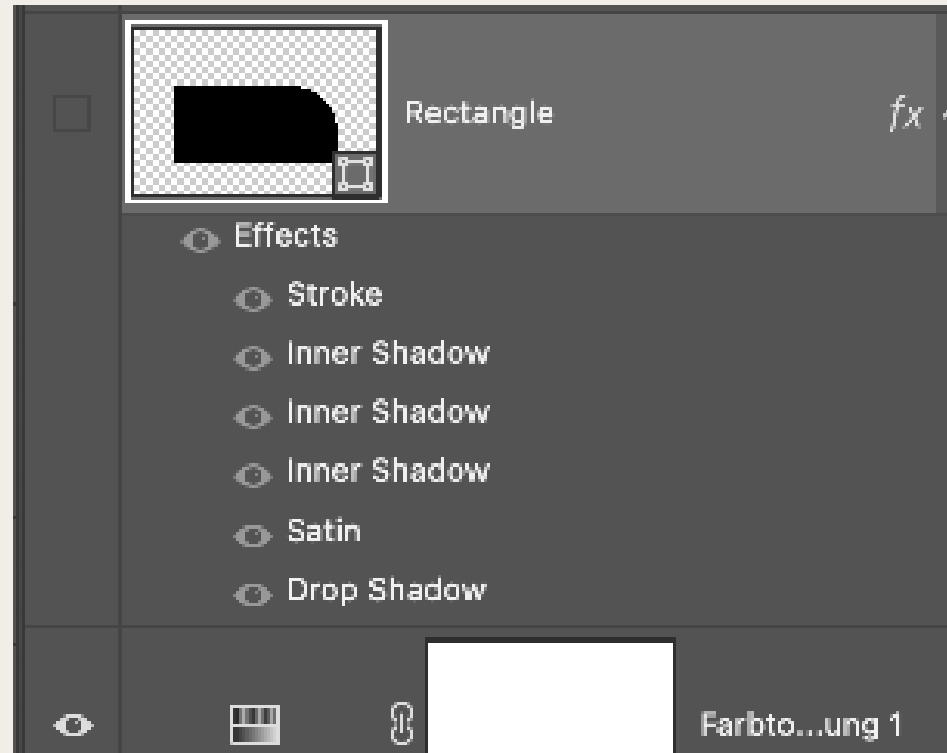

3.

The **Displace** filter gets applied as a **Smart Filter**, so further adjustments can be made. Create a mask based on the shape. To give the appearance of frosted glass or make it easier to add copy on top of the glass, add a **Gaussian Blur** (also applied as a Smart Filter which allows for later adjustments).

4.

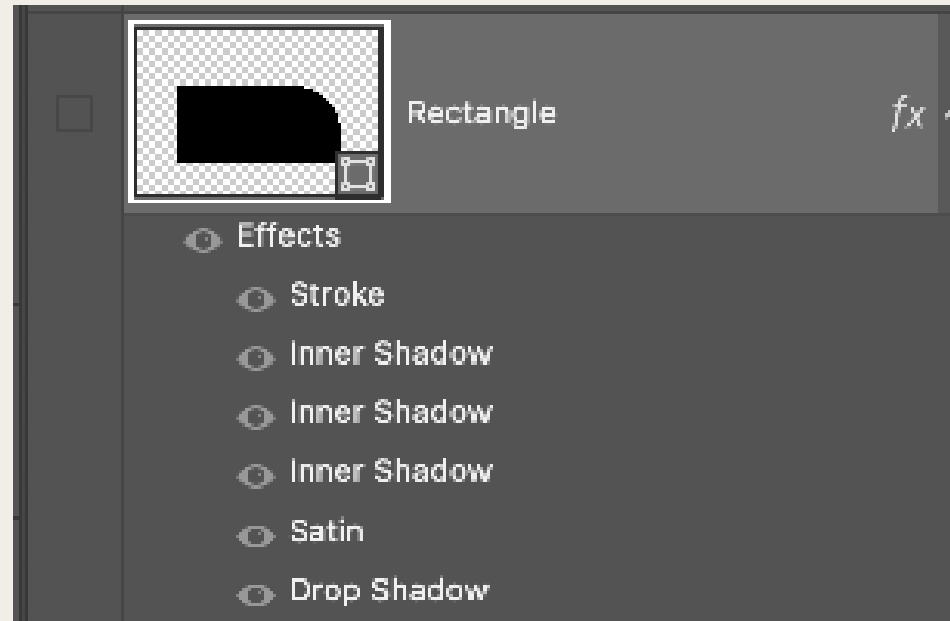

To achieve the desired glass effect, start by selecting the original shape used to create the Displace Filter file. Apply multiple **Layer Styles** to this shape. The specific parameters should be adjusted based on the characteristics of your image to refine the glass-like appearance.

On the next page, you'll find example settings that can serve as a starting point. Feel free to tweak these values to best suit your image.

4.

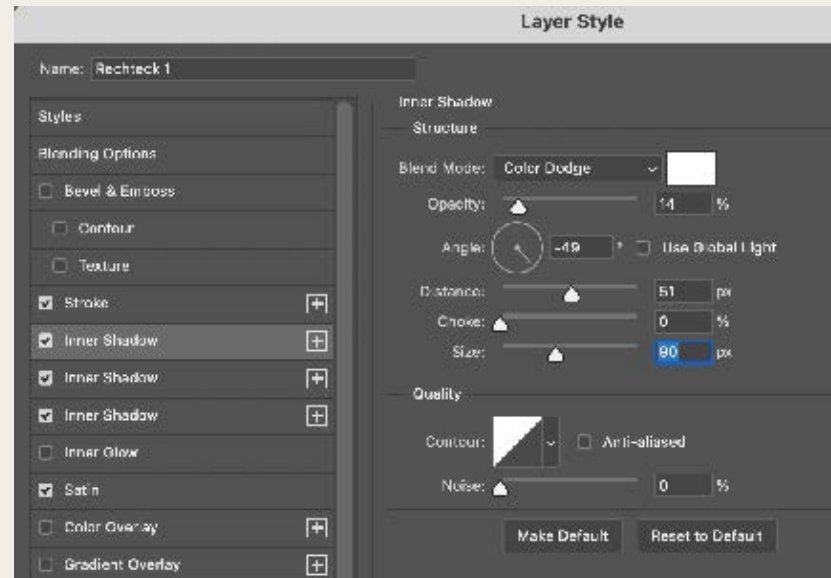

The original shape used to create the Displace Filter file is selected, and several Layer Styles are applied. Two to three **Inner Shadows** define the glass, while **Stroke** gives the glass definition and refinement. **Satin** flattens out the look of the glass shape. **Drop Shadow** adds depth.

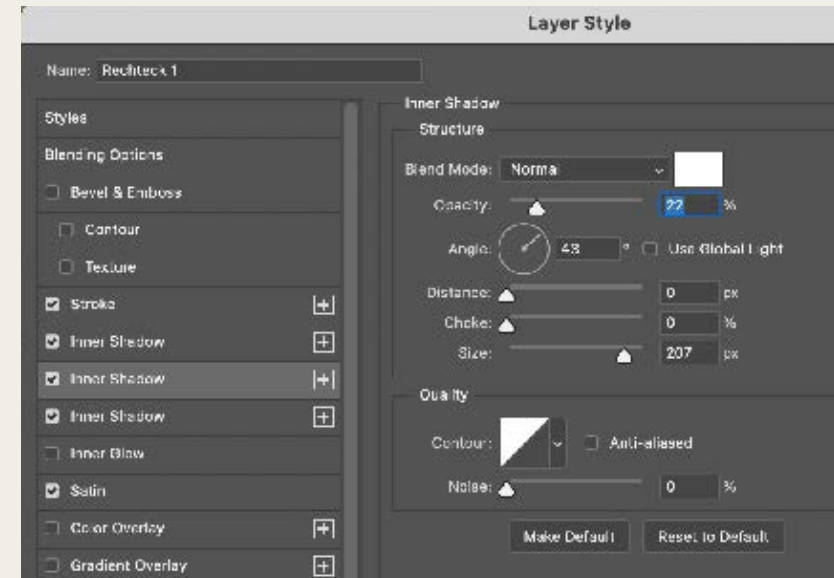

Depending on the size and coloring of the image, adjust the individual parameters to achieve the desired glass effect.

The next page shows example settings.

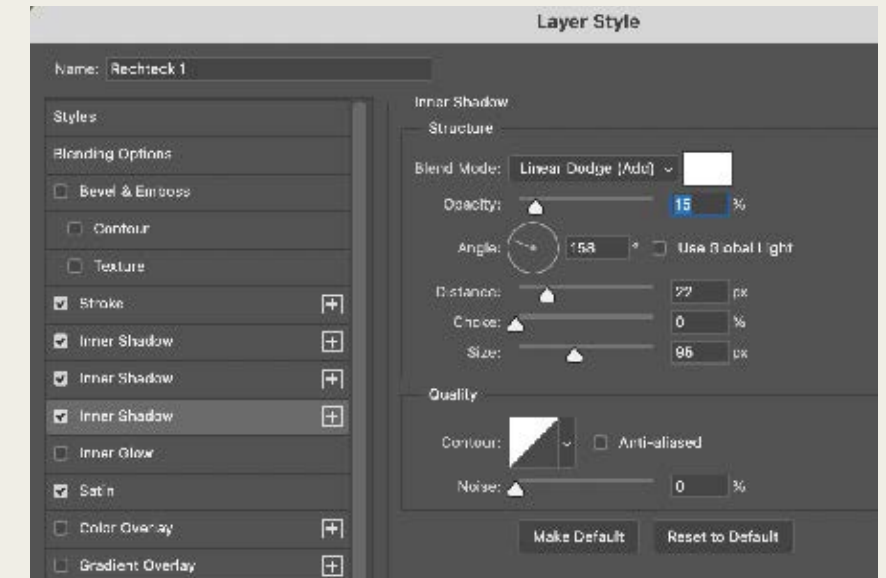

4a.

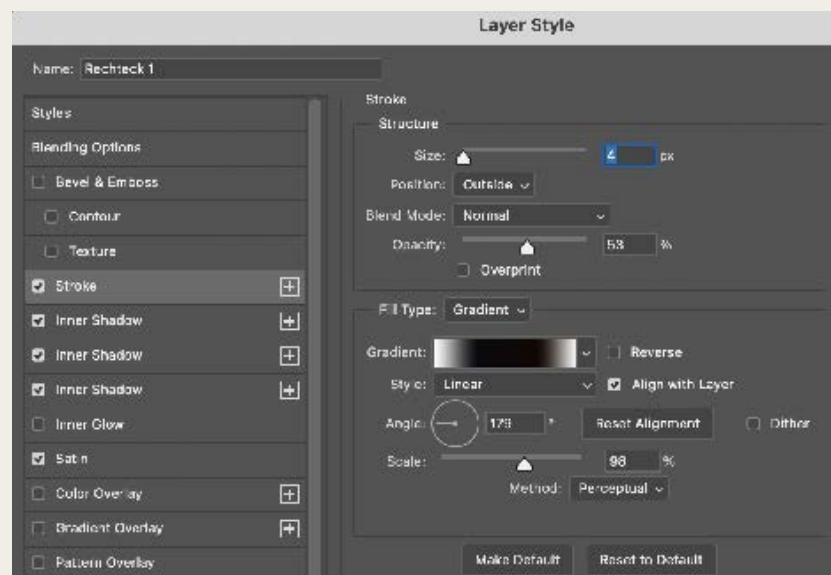

1. Inner Shadow

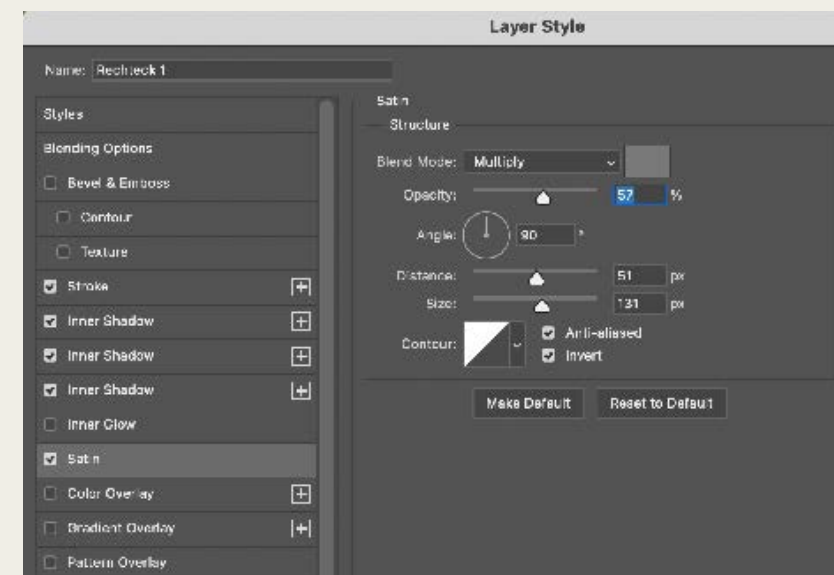

2. Inner Shadow

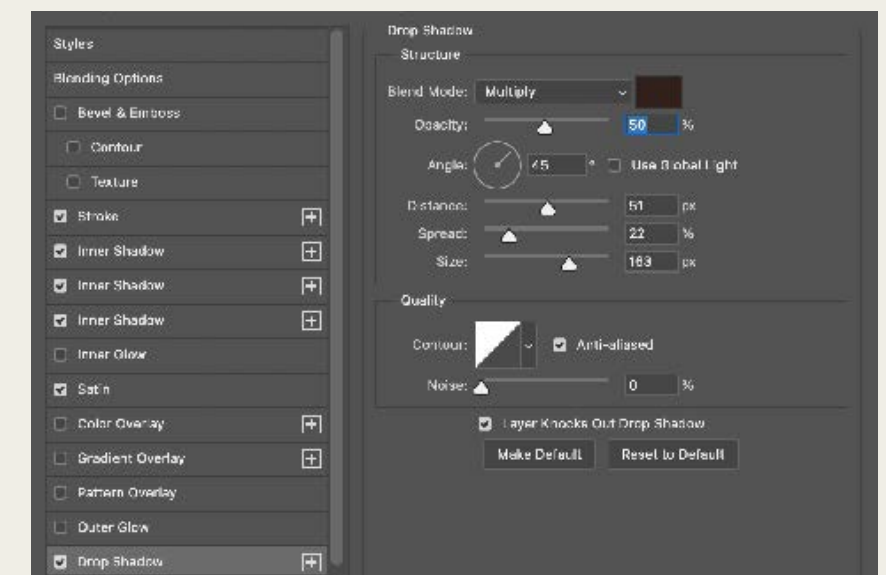

3. Inner Shadow

Stroke

Satin

Drop Shadow

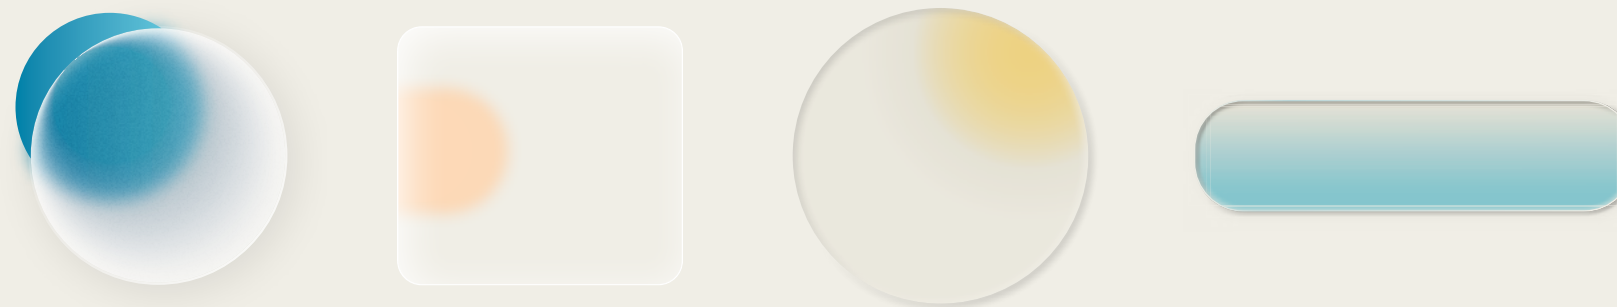

Layout Elements

The appearance of the glass effect in layouts will vary depending on the software used to create it. Photoshop offers the highest level of control and refinement when adding glass elements to images.

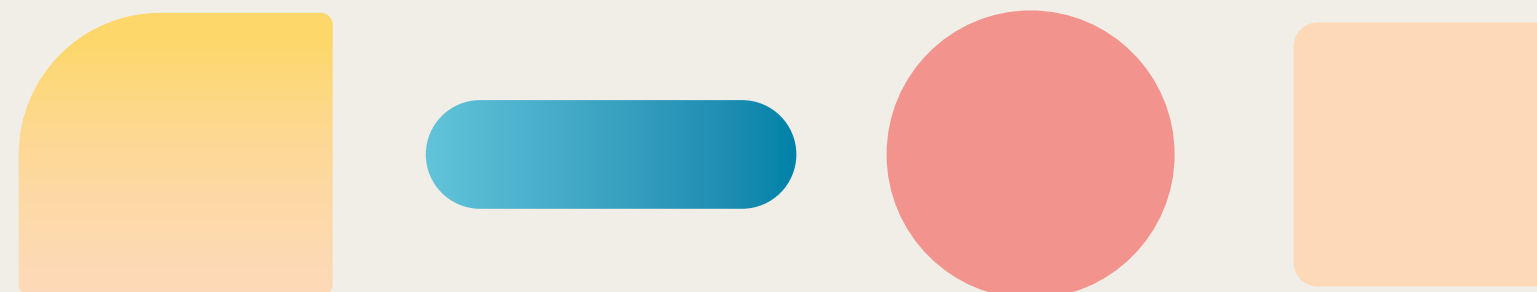

If Photoshop isn't an option, a similar, though slightly less realistic, effect can be achieved in layout programs such as InDesign by using Effects to create blurs and overlays.

Opt for shapes such as circles, pill forms, or rectangles with rounded corners. Subtle corner rounding creates a calmer, more refined look, while asymmetrical rounding can add a dynamic touch if the layout calls for it.

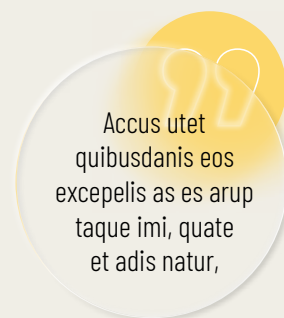

Glass element examples

Solid shape examples

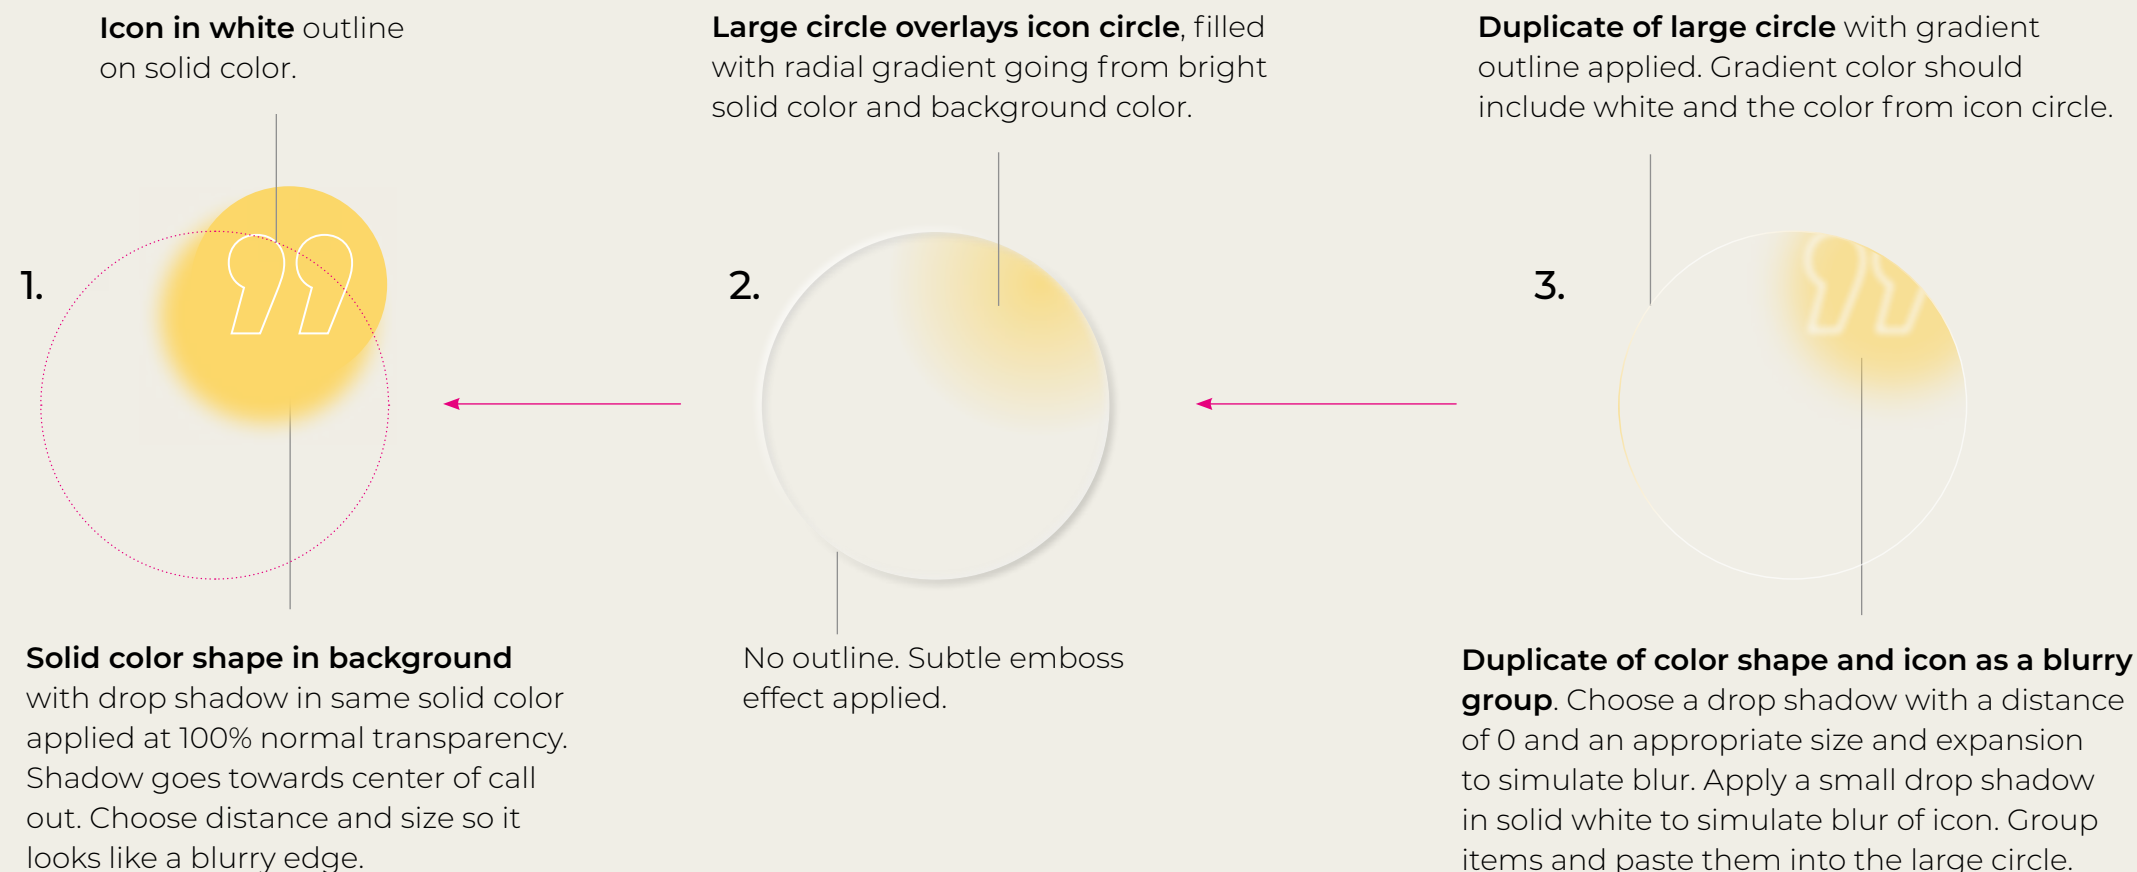

These pages offer a few ideas on how to achieve a glass effect in page layouts. These are just suggestions. There are many other ways to create the desired look. The goal is to keep the effect subtle, elegant, and as realistic as possible, without requiring excessive effort. Adjustments should be made based on the layout's size, placement, and color scheme.

Call out example 1

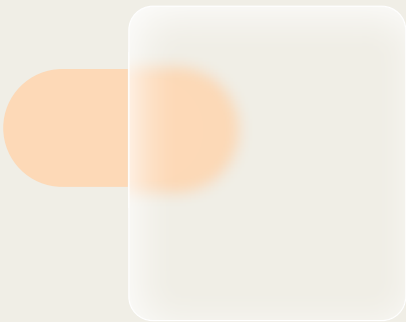

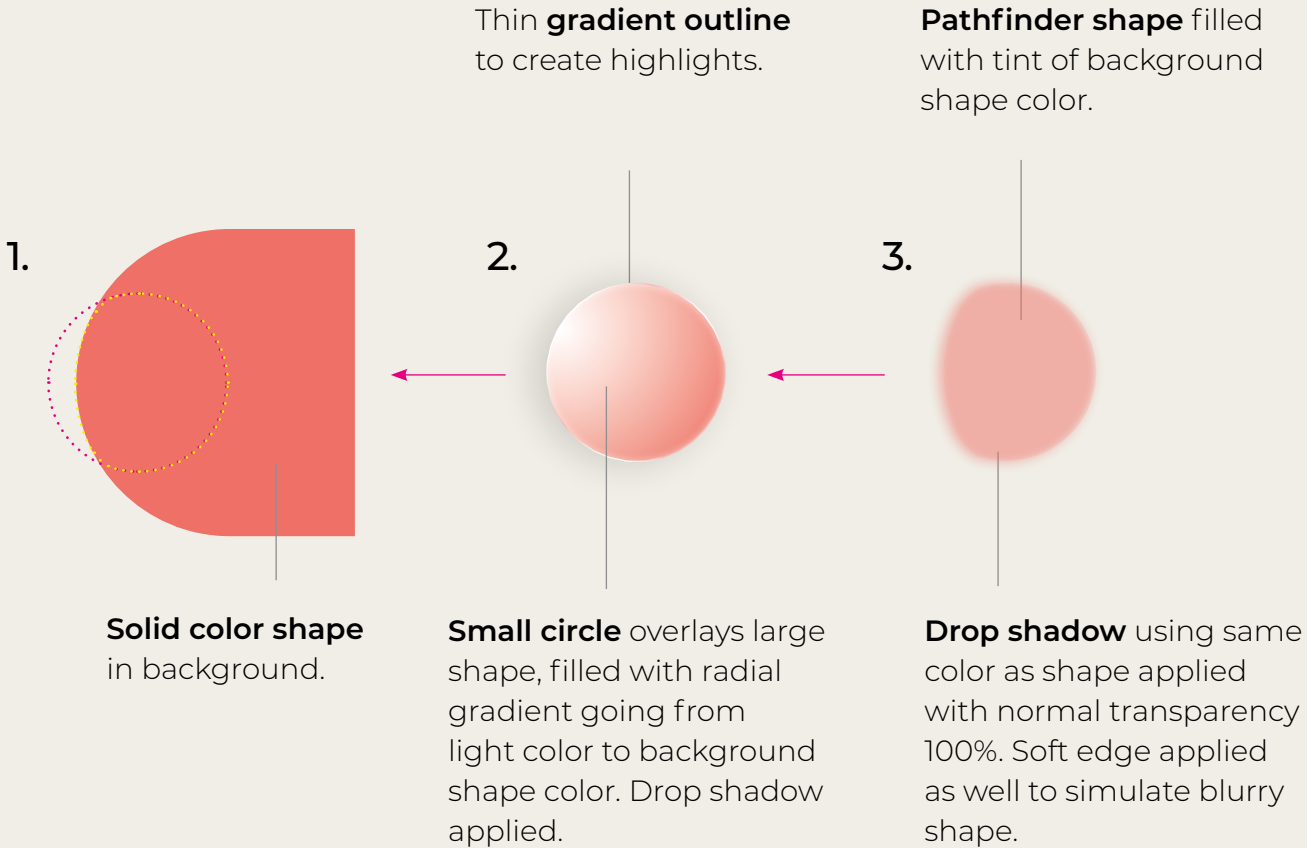

Made up of three-layered elements. Small background element with icon, overlaid with larger embossed gradient circle. Third element is copy of large circle with blurry group small background pasted inside.

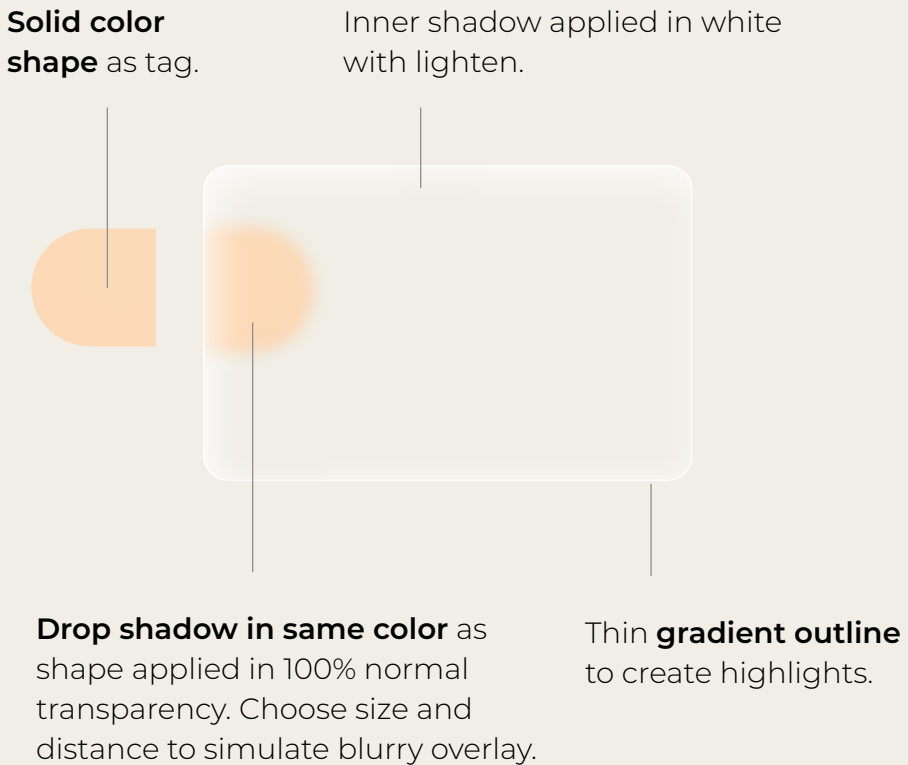

Call out example 2

Made up of three-layered elements. A large solid color call-out shape, overlaid with smaller gradient shape. A third shape, created with the Pathfinder tool overlays the smaller circle.

Call out example 3

Made up of two elements. Large background shape with outline and inner shadow applied. A smaller shape as tag attached to the background shape. Same shape is pasted into large shape with drop shadow effect applied.

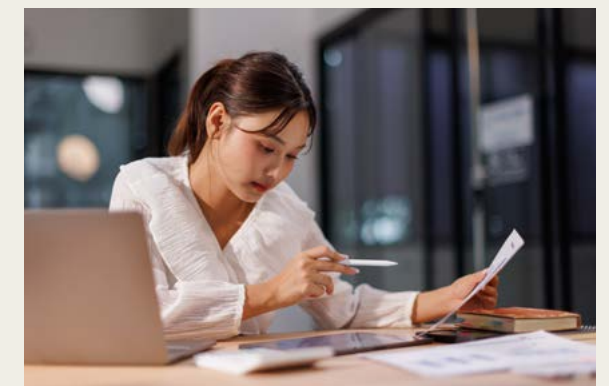

IMAGERY

Photography is an important tool to communicate our message to the audience.

The imagery chosen should be warm and authentic. When using a glass element as a call-out, make sure the person is not obscured behind the glass, either by placing the glass overlay next to the subject or by placing the silhouetted, in-focus subject on top of the glass.

While it can be difficult to find the right stock images, it's recommended to prioritize photography that feels candid and natural, to reflect the authenticity of the campaign.

The imagery should feel positive and empowering to patients. It's advised to avoid showing images of patients that are overly sad or depressed.

Glass Effect

The glass effect used on images should be used very intentionally with the image in mind. The glass overlay should be used to enhance an image and help any overlaid copy stand out.

In certain circumstances the glass effect can be reversed to bring focus to a portion of the image without adding copy to the image.

The glass effect is placed on the image without taking the focus away from the subject.

Choose a blur for the area under the glass effect so there is sufficient contrast for copy.

The glass effect is placed in a way so the focus in the image is preserved and accentuated.

Part of the image can be overlaid on the glass element.

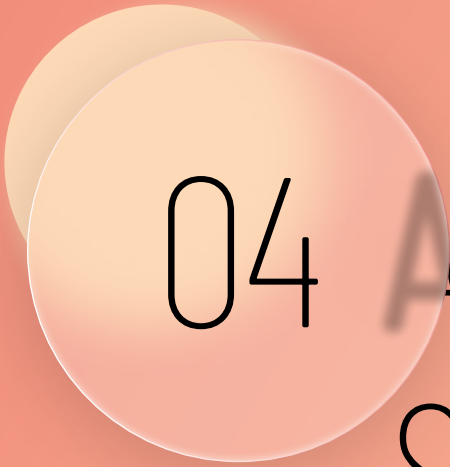

The portion of the image that is "behind the glass" is blurry so copy is more readable.

Things to Avoid

To keep a consistent look and feel across patient materials, make sure images follow a similar style.

It is also important to keep our audience in mind and make sure that images have an impact and resonate with the reader. Therefore, there are a few things to avoid when choosing imagery:

X DO NOT use grayscale images.			X DO NOT use expressions that are overly exaggerated.
X DO NOT use images that are overly detailed or colorful.			X DO NOT use images that are too dark.
X DO NOT use images that are very bright.			X DO NOT use images with unusual or overly artistic exposure.

04 ACTIVATION STRATEGY

OVERVIEW

Our messaging approach supports patients as they move from silent suffering to confident self-advocacy, with renewed hope as the key driver of this change. It is designed to activate behavior by aligning emotional triggers, message focus, and calls to action across four key moments:

1. AWARENESS: Understanding CSU

Recognizing CSU is not just a skin issue but also a chronic condition that impacts all aspects of life.

2. CONSIDERATION: Ask for More Beyond AH

Understanding AH may not be enough and that other options exist.

3. ACTIVATION: Speak Up

Feeling empowered to express how CSU impacts sleep, work, and daily life.

4. MOTIVATION: Why It Matters

Believing a life closer to normal is possible and worth asking for.

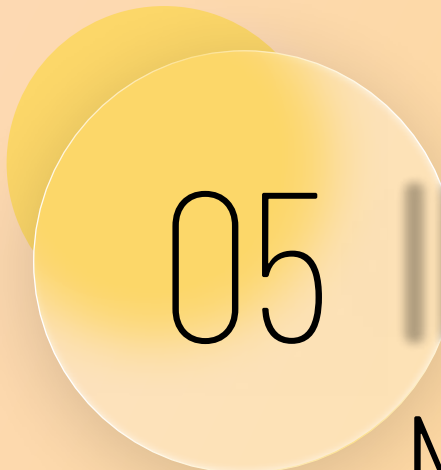

Together, these stages build awareness, create urgency, drive action and sow motivation, ultimately guiding patients to explore new options with their doctor or dermatologist.

Engagement Plan: Thought Starters

STAGE	MESSAGE FOCUS	CHANNEL FOCUS	CONTENT TYPE	TACTICAL IDEAS
Understanding CSU (Recognition)	From normalization to recognition Validate CSU as serious and impactful	Clinic spaces, waiting rooms, DOOH, social awareness placements	Hero visual, posters, reels, validation copy	• Use digital OOH with relatable moments disrupted by itch/sleep • Deploy symptom awareness tiles on patient websites • Paid Social • SEO • Display hero visuals in waiting areas • Include CSU “Did you know?” statements in clinics
Ask for More Beyond AH (Realization)	From coping to exploring new options Show that there are other treatment options	Paid social, influencers, YouTube, search	Educational videos, explainer carousels, symptom quiz	• Launch symptom quizzes that end with suggestions • Deploy retargeted content to those who engaged with awareness phase • SEO • Discussion Guide
Speak Up (Activation)	From silence to confident expression Highlight value of describing burden	Unbranded website, onboarding tools, nurse handouts	Doctor discussion tips, printable question prompts, symptom tracker	• Provide “How to talk to your doctor” materials • Include charts that patients can use to track their symptoms and their mood • Share checklists via SMS/email post-appointment • Discussion Guide
Why It Matters (Motivation)	From resignation to hope Paint a picture of life closer to their normal	Retargeted digital, testimonial videos, lifestyle placements	Real life experiences, message wall, goal reminders	• Share testimonials focused on reclaiming normal life • Use reminders of sleep/focus gains over time

05 INFLUENCER AND MEDIA INTEGRATION

THE CASE FOR INFLUENCERS

Influencers are able to give people the confidence to speak up and the tools to be more assertive in their communication with their doctors:

76% report that influencers have a high impact on their condition management¹

92% are likely to ask their doctor about disease information shared by an influencer²

People are looking to influencers as they provide personalized viewpoints that can help authentically engage audiences and create a sense of trust:

37% of people turn to influencers before going to their doctors³

Available from: <https://www.charityrx.com/blog/the-shifting-role-of-influence-and-authority-in-the-rx-drug-health-supplement-market/> [Last accessed: October 2025].

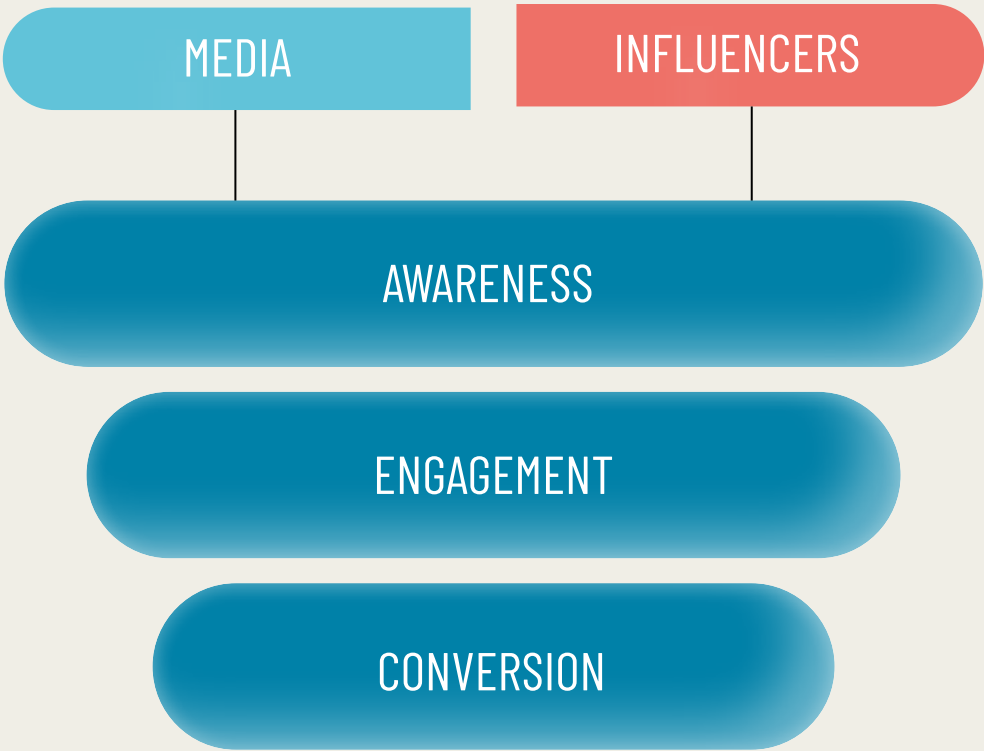

THE CASE FOR MEDIA

Despite the rise of social media, news media is still a popular source of reputable information for 20–40-year-olds:

74% of Gen Z and Millennials still consume news from traditional outlets (TV, newspapers, websites) at least weekly¹

45% do so daily¹

Influencers and media play a vital role in opening up the top of the patient journey funnel, priming our audience with awareness and relevance, and setting the stage for deeper engagement

THOUGHT-STARTER ACTIVATION IDEAS

Patients with CSU are increasingly turning to online communities for disease education and advice, so there is an opportunity to leverage influencer channels to reach the digitally active patient with CSU

WHAT WE KNOW...

CSU mostly affects women aged 20–40, at a time often described as **the prime of their lives**.

Patients with CSU are increasingly turning to **online communities** for education, advice, and proactive solutions for their condition across a variety of topics

WHAT WE CAN DO

Leverage influencer channels to reach digitally active people with CSU and encourage them to:

- **Speak up** and effectively report their key symptoms and the impact of CSU on their daily lives
- Have a **meaningful conversation** with their doctor or dermatologist about their symptoms and needs

FINDING THE RIGHT INFLUENCERS

It's vital to identify influencers as early as possible. If your country has no current CSU influencers, use the CSU influencer development program to identify and support appropriate influencers. These influencers will fit into two broad categories:

PATIENT CAMPAIGN AMBASSADORS

These partners will be people with CSU with micro-influence or desire to build an influential community to advocate for CSU

LIFESTYLE INFLUENCERS

These partners will be established professional and expert voices who don't have CSU and are lifestyle influencers, focusing on beauty, sports, or fashion

Ensure all activities are aligned to your market legal/regulatory/cultural requirements and the [international Social Media Influencer guidance](#)

AN OVERVIEW OF THE CSU INFLUENCER DEVELOPMENT PROGRAM

The international communications team has developed toolkits to guide you through the CSU influencer development program. These will help you to identify, develop, and prepare influencers to activate *The Smallest Part of Life* campaign.

1 Identify

Program overview to socialize the initiative with internal and external stakeholders.

Internal guidance on how to identify patient campaign ambassadors and lifestyle influencers, then evaluate their suitability.

Review map and guidance on local approval requirements.

Timing: L-12

[CLICK TO ACCESS](#)

2 Develop

Internal materials to help with setting up and running briefing sessions with selected influencers.

Briefing slides to present to influencers, including CSU background materials and social media guidance.

Timing: L-8

[CLICK TO ACCESS](#)

3 Support

Briefing document to enable influencers to distribute engaging and authentic content around key CSU awareness days.

Includes content development guidelines, visual recommendations, content approval workflow, disclosure guidelines, and community management protocols.

Timing: L-6 onwards

[CLICK TO ACCESS](#)

4 Activate

Influencers to activate *The Smallest Part of Life* campaign.

Use the information provided in this implementation guide, as well as previous materials from the influencer development program.

Timing: L-2

[USE THE FOLLOWING SLIDES](#)

MEASUREMENT

Measurement framework to set goals/benchmarks, evaluate metrics, and implement a test/learn approach

Timing: ongoing

[CLICK TO ACCESS](#)

Please note that all materials have received international FUSE approval but will require local FUSE approval before distribution

HOW TO ACTIVATE *THE SMALLEST PART OF LIFE* CAMPAIGN WITH INFLUENCERS

Influencers will:

- Build **awareness** that CSU is not just a skin issue but also a chronic condition that impacts all aspects of life
- Empower and **activate** people to **speak up** and effectively express how CSU impacts sleep, work, and daily life
- Encourage people with CSU to have **honest conversations** with their doctor or dermatologist about their symptoms and needs
- **Motivate** people to believe a life closer to normal is possible and worth asking for

Adapt the influencer briefing document from the influencer development program support toolkit.

TIPS FOR ADAPTATION

- Pay specific attention to the text in highlights and comments
- Update based on partner agreements, budget, local compliance, social media governance policies, etc.
- Change the information about awareness days to information about *The Smallest Part of Life* campaign, using the messaging in this Toolkit, and consider developing a campaign hashtag for influencers to use across all posts
- Provide the correct community response matrix, as they differ for patient campaign ambassadors and lifestyle influencers

Ensure you have used the Measurement Toolkit to set goals or benchmarks before activating

As each country will have specific regulations for how influencers must disclose sponsored posts, ensure you work closely with your legal and compliance teams to follow all local regulations

Ensure local compliance and legal representatives review content and all activities are aligned to the international [SMI guidance](#)

THOUGHT-STARTER ACTIVATION IDEAS FOR PATIENT CAMPAIGN AMBASSADORS

The thought-starter activation ideas on the following slides introduce an influencer-led storytelling lens through *The Smallest Part of Life*. They have been designed as a source of inspiration

- Influencers will already have their own distinctive voice and style on social media. While they will ultimately interpret the campaign in a way that feels authentic to their channel, you can collaborate with them by sharing thought-starters to help guide how the campaign is brought to life
- This will help ensure that the CTA, “Make CSU the smallest part of your life”, comes through clearly in their content

When working with influencers who don’t have CSU, ensure the campaign messaging reflects their role as allies. Their content should focus on raising awareness, encouraging open dialogue and empowering those with CSU to speak up. Consider CTAs such as: **“Let’s speak up together to help make CSU the smallest part of people’s lives.”**

*CSU=chronic spontaneous urticaria; SMI=social media influencer.

"THIS GLASS ISN'T MINE, BUT IT COULD BE YOURS"

ACTIVATION TYPE: COMMUNITY-BASED

Host a live virtual event* or use social polls to collect CSU challenges (e.g. itching, anxiety, sleeplessness, missed events). Write the challenges on pieces of paper and use them to fill up a clear glass. As the influencers do this, they explain each one, speaking from a place of empathy and allyship, saying things like: "This glass isn't mine, but I want to help make it smaller for those who carry it."

Consider partnering with people living with CSU to help provide and explain the CSU challenges.

*These events are organized by Novartis under existing collaboration contracts, with payment and content review and approval handled locally through the existing processes.

ACTIVATION TYPE: CREATIVE EXECUTION

SPLIT-SCREEN SCENES SERIES

Develop a mini-series of split-screen or side-by-side content showing two versions of the same moment.

On the one hand, influencers show how CSU symptoms might overwhelm a situation (e.g. disrupted sleep, avoiding social events). On the other hand, they show the same scenario with symptoms minimized through proper management (e.g. sleeping peacefully, enjoying dinner out confidently).

They explain that it's possible to minimize the disruptive, overwhelming impact of CSU on everyday life and empower patients to speak up together.

*CSU=chronic spontaneous urticaria; CTA=call to action.

Strategic Foundation

Messaging

Creative Concept

Activation Strategy

Influencer Integration

Local Market Adaptation

Contact

ACTIVATION TYPE: REAL-LIFE MOMENT

Share examples of everyday life instances where you wouldn't think twice about taking action (e.g. phone being stolen, receiving the wrong food order, calling your landlord to fix the shower, etc.).

Influencers then draw the parallel to CSU, focusing on disrupted sleep and missing life events, with messaging such as: "You'd tell your barista if they got your coffee order wrong ... so, if your CSU is still affecting your sleep, speak up."

ACTIVATION TYPE: REAL-LIFE MOMENT

**SPEAK UP TOGETHER
TO MAKE CSU
THE SMALLEST
PART OF
PEOPLE'S LIVES**

ACTIVATION TYPE: CREATIVE EXECUTION

Influencers use the social media green screen feature to appear as a miniature version of themselves. While appearing small on screen, create a video series with a mix of 5-second quick-fire reels and longer candid videos.

The content includes awareness content, ending with a unifying message for their followers to: "Speak up together to make CSU the smallest part of people's lives", all while visually reinforcing the idea of making CSU a smaller part of their life.

TINY CONVERSATIONS

*CSU=chronic spontaneous urticaria; CTA=call to action.

THOUGHT-STARTER ACTIVATION IDEAS FOR INFLUENCERS

When working with patient campaign ambassadors, tailor messaging to reflect their lived experience with CSU. Some may still be navigating daily challenges, so authenticity is key to building trust with their communities. Consider inclusive CTAs such as: **“Let’s speak up together to make CSU the smallest part of our lives.”**

*CSU=chronic spontaneous urticaria; CTA=call to action; POV=point of view.

[Strategic Foundation](#)[Messaging](#)[Creative Concept](#)[Activation Strategy](#)[Influencer Integration](#)[Local Market Adaptation](#)[Contact](#)

“WHAT I KEEP UNDER THE GLASS” SERIES

Use a clear glass to symbolically contain CSU challenges. The glass is filled with pieces of paper with written CSU challenges or experiences they wish they could control, such as itching, anxiety, sleeplessness, or missing out on life events. In each video, the influencer draws out a piece of paper and explains what it is. As the series progresses, the glass becomes emptier, showing how CSU can be managed and minimized.

Followers are encouraged to share what’s in their glass, encouraging them to think about the CSU challenges that they should be speaking with their doctor about.

ACTIVATION TYPE: CREATIVE EXECUTION

ACTIVATION TYPE: COMMUNITY-BASED

Host a live virtual event* where attendees discuss the real-life events they have missed due to CSU flare-ups (e.g. birthdays, weddings, vacations, or nights out). Ask them to share excuses they have (e.g. “I’m not feeling well”, “I had a work thing”, “I couldn’t get childcare”), with the “big confession” being the real reason behind it: CSU.

End the session with the message: “If CSU is still causing big confessions, it’s time to speak up. Together, we can make CSU the smallest part of our lives.”

“BIG CSU CONFESSIONS” LIVE

*These events are organized by Novartis under existing collaboration contracts, with payment and content review and approval handled locally through the existing processes.

*CSU=chronic spontaneous urticaria; CTA=call to action; POV=point of view.

"MOMENTS WHEN CSU STAYED SMALL"

Influencers show a series of moments or life events they were able to experience or attend on days when their CSU symptoms were managed. They reflect on how CSU didn't take center stage and share the aspirational campaign message that speaking up and making CSU the smallest part of their life could make more moments like this possible.

To ensure content is engaging, use the social media green screen feature to appear as a “miniature”, or tap into social media trends, such as “POV”, “You look happier”, or “I almost forgot this was the whole point”.

ACTIVATION TYPE: REAL-LIFE MOMENT

ACTIVATION TYPE: REAL-LIFE MOMENT

Share a real bedtime routine in the style of a candid “get ready with me” video.

Influencers explain how important sleep is, highlighting what helps them to manage CSU at night, and what still challenges them.

They end the video by confirming that they will speak to their doctor or dermatologist about the remaining challenges in their next appointment and encourage others to do the same.

NIGHT ROUTINE WITH CSU

AMPLIFYING INFLUENCER ACTIVITIES FURTHER THROUGH THE MEDIA

To accompany the influencer social activation, we encourage engaging with the media through pitching feature-led stories based on your influencer's experiences.

EMPHASIZE KEY CAMPAIGN THEMES IN STORYTELLING WITH THE MEDIA

- CSU is not just a skin issue but also a chronic, immune-related disease that impacts all aspects of life
- CSU impacts sleep, work, and daily life
- A life closer to normal is possible and worth asking for

*CSU=chronic spontaneous urticaria; HCP=healthcare professional; PAG=patient advocacy group.

INCORPORATE INFLUENCER CASE STUDIES

Patient campaign ambassadors

Pitch in-depth versions of their stories such as:

- Their CSU journey
- How CSU affects their sleep, work, and daily life
- How they have worked with their doctor to achieve a life closer to normal

Lifestyle influencers

Pitch feature interviews with outlets relevant to the lifestyle influencer(s) you're working with about topics such as:

- Why they're using their platform to spotlight misunderstood conditions like CSU
- Their personal motivation and confidence to speak up and encourage others to advocate for better care

Also consider including insights from third-party experts, such as quotes or commentary from HCPs or PAGs

*CSU=chronic spontaneous urticaria; HCP=healthcare professional; PAG=patient advocacy group.

06 LOCAL MARKET ADAPTATION

ABOUT LOCAL MARKET ADAPTATION

Our goal is simple: to help people make CSU the smallest part of their life. We believe this is only possible when we adapt our global campaign materials for each local market.

This means keeping the campaign's voice aspirational, while adjusting translations and respecting local cultural and regulatory needs. The central message, strategy, and fixed assets remain the same, but local teams have the flexibility to bring the campaign to life in a way that feels resonant for their audience.

By helping people with CSU recognize their ongoing burden and encouraging them to speak up, we can create the emotional and practical foundation for real behavior change and treatment escalation.

We recommend engaging with local PAGs to empower them as campaign ambassadors—before, during, and after the rollout.

FIXED AND FLEXIBLE ASSETS

INTERNATIONAL FINAL ASSETS	INTERNATIONAL ASSETS TO BE ADAPTED LOCALLY	LOCALLY CREATED ASSETS
Fixed, approved assets. Minor adjustments in language and format are possible to account for cultural or media nuances. Local approval required.	Approved assets. Adjustments in language and format are possible, in line with implementation guide based on cultural and media nuances. Local approval required.	Locally created assets developed in line with campaign implementation guide. Local approval required.
Assets: • Patient campaign: - Visuals and films - Key messages • Implementation guide (internal)	Assets: • Website/WeChat modules and website implementation guide • Discussion guide • Patient brochure • Print and digital ads: social media, web banners, SEA, etc.	Assets: • Channel specific assets for only locally used channels • Additional assets necessary due to local differences

TONALITY AND TRANSLATION

The tonality of our campaign is **aspirational, positive, and liberating**—this should be reflected in our campaign materials and in translations of our content.

Headlines should always appear as statements, not questions, to present a clear and definitive call to action to patients.

When translating this campaign into different languages, it is important to preserve the original intent of the headline and our body copy as much as possible.

Content writing tips

Keep our target patient segment, the Desperate Seeker, in mind when creating content. Think about the things they'd like to know, see and hear.

Content should feel friendly and supportive. We are always by their side in their struggle with CSU.

Try to keep language simple and accessible, so patients of all literacy levels can easily understand our content.

CULTURAL CONSIDERATIONS

As you develop assets to deliver the campaign in your market, it's important to always be sensitive to local cultural or regulatory considerations. This ensures our campaign remains relevant to, and representative of, people with CSU all over the world.

Cultural considerations can affect makeup, hair, clothing, facial expressions and more, and should be applied to the flexible elements of the campaign, especially when selecting supporting imagery.

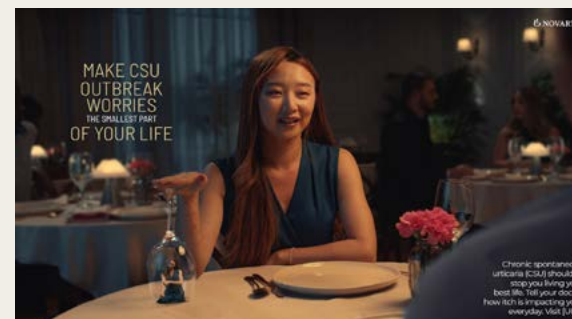

As part of the campaign, two alternative executions for both scenarios have been developed.
